

In-process interface to Servo.  
It does everything necessary to render the web, primarily  
orchestrating the interaction between JavaScript, CSS layout,  
rendering, and the client window.

Maintains the pipelines and navigation  
context and grants permission to composite

Mutable field in the DOM

Traced reference to a DOM object  
This should only be used as a field in  
other DOM objects.

Freely-copyable reference to a rooted  
global object.

Object that knows how to  
create flows

Fragments (struct Fragment) are the leaves of the layout  
tree. They cannot position themselves. In general,  
fragments do not have a simple correspondence with CSS  
fragments in the specification:
